Professionally converted for accurate flowing-text e-book format reproduction, this unique study analyzes the current status of the Russian Federation's ballistic missile submarine force. It reviews the history of the ballistic missile submarine force, its current status, and the implementation of plans currently in progress and as well as the advantages and disadvantages of maintaining a ballistic missile submarine force. This thesis also assesses the other two legs of the nuclear triad - the intercontinental ballistic missiles (ICBMs) and long range bomber aircraft. The status of these two forces and their operational advantages and disadvantages are compared with those of the ballistic missile submarine force. Also examined are the financial and political factors that may affect the prospects of the ballistic missile submarine force. This includes arms control treaties that may affect the force structure. Current and prospective energy prices suggest that the economy of the Russian Federation will be able to provide long term financing for the ballistic missile submarine force and Moscow's other strategic nuclear forces. This thesis concludes that the ballistic missile submarine force is a vital part of the Russian Federation's nuclear triad and will probably be maintained over the next 15 years and beyond.

The purpose of this thesis is to analyze factors that may shape the future of Russia's nuclear ballistic missile submarine (SSBN) force. The objective is to reach informed judgments as to whether and to what extent the SSBN force will be able to survive in Russia in light of budget constraints, evolving political and strategic priorities, and competition from bomber aircraft and land-based missiles. One of the key issues is to what extent maintaining ballistic missile submarine capabilities is beneficial to the Russian Federation (RF). Will Russian decision makers abandon the SSBN force in favor of more reliable and financially affordable assets? This thesis examines the characteristics of the SSBN force, including stealth, command and control,

maintenance concerns, survivability, and capabilities, and then analyzes its merits and shortcomings. Operational and deterrence mission competition from land- and air-based platforms is examined to assess their role in the future of Russia's nuclear arsenal. Finally, budgetary competition from the rest of the navy is considered as yet another factor that may affect the prospects of the SSBN force.
