Starting off with the fundamental concepts of Less and CSS, you are taken on a tour of how to improve your web development skills with Less.

Next, you get to grips with mixins and variables in Less, which help you to avoid code duplication and write reusable code. Then, you venture into the concepts of nested rules, operations, and built-in functions, which help you in the dynamic creation of CSS properties and help you to create shorter and effective style sheets.

By the end of the book, you will be able to develop code faster and reduce the maintenance time for your web development projects.
