Proceedings Of The Scientific Workshop On Health Effects Of Electric And Magnetic Fields (emf) On Workers Philip J. Bierbaum, John M. Peters

The National Institute for Occupational Safety and Health (NIOSH) convened a group of scientist on January 30-31, 1991, in Cincinnati, Ohio, to develop a national research strategy on the health effects of electromagnetic radiation on workers. The purpose of the workshop was to review current data and new findings regarding electric and magnetic fields which may have relevance for occupational exposures; to identify knowledge gaps that might be filled by directed research; and to recommend a national research agenda which, if implemented, would close the gaps and permit reliable recommendations for protecting workers. The workshop emphasized electric and magnetic fields at frequencies up to 1000 Hz, excluding static fields; and carcinogenic, reproductive, and neurologic health effects.
